Professional summary

IT professional with experience in IT support, system administration and software development . I enjoy solving technical problems be it fixing hardware faults to building system automation systems that saves time and lowers the risk of errors. I have worked in healthcare, community and business adjacent settings and I am very motivated by projects that make tech easier for people to use and currently building my cybersecurity skills by going through the CompTIA Pentest +.

Technical skills

- Software development: efficient in java and python languages
- Web Development: HTML, CSS, JS, Angular, typescript and express.js
- Data Analytics: SQL and mongoDB
- Cloud Systems: AWS, Azure, docker, cisco hardware , YAML and Wireshark
- IT Support: Device repair and testing, OS Imaging , malware removal, Linux automated installs and system recovery
- People Skills: very patient with people, problem solving , strong interpersonal skills , good at blending in and a strong collaborative team player

Professional Experience

IT Technician / TDR Tester – Vanrath (HSCNI Encompass Programme) | Feb 2025 – May 2025

Contributed to one of the largest European healthcare transformation projects encompass by running testing scripts and repairing issues on the fly when something failed a test script

- Helped reduce more than 90,000 TDR test scripts to just 64 by troubleshooting validating and resolving issues on the fly in the fast paced environment of healthcare while the clinical staff still worked
- Assisted in helping seamless work between hospital staff, wards and IT teams which helped reduce downtime and supporting the staff to stay productive
- Communicated and coordinated with clinical staff to arrange times to meet which in turn helped ensure a smooth system adoption and minimal disruption to them
- Provided post go live support resolving issues and helping guide staff using knowledge-based judgement and documentation

Volunteer IT Technician – Foyle Repair & Share | May 2025 – Present

- Refurbished and recommissioned over 50 devices that guided community members improving digital literacy and helping first time users confidently use computers
- Performed malware removal , secure backups and data wiping to help with privacy of previous owners

- Provided technical guidance to help improve digital literacy

Customer Service Representative Pure Telecom | Dublin, Ireland | 2015 – 2017

- Acted as first line point of contact for residential customers using phone email and written correspondence in a professional manner
- Investigated and resolved customer queries and complaints promptly to help ensure customer concerns were addressed
- Managed administrative tasks and outbound follow up calls efficient which maintained accurate customer records and meeting expected timeframes

Sales assistant – fabrics and alterations Letterkenny 2011-2014

- Assisted customers with fabric selection and alterations while providing customer service
- Managed stock , handled cash transactions and maintained a organised retail environment

Education

BSc in Computing – Atlantic Technological University | 2018 – 2023

- Programming: python java, PHP and Javascript
- Web development: HTML, CSS , Bootstrap, Angular Node.js and Express.js
- Databases: MySQL, PostgreSQL and Mongo DB
- Cloud and networking: AWS, Azure, Linux and Cisco
- Scripting and automation: Bash and PowerShell

Business Management (Level 6) – FAS Letterkenny | 2014 – 2016

Projects and additional information

- MotoPi- Designed and developed a Raspberry Pi prototype using Python and environmental sensors to provide rider safety alerts. The project strengthened my embedded systems knowledge and practical problem-solving skills.
- Rhythm Shelf – A desktop application I designed and developed to organise large music libraries by categorising tracks, artists, and albums, cleaning and standardising metadata, and improving navigation and overall library management through an intuitive interface.
- War and Peas – A simple 2D platforming game developed using GameMaker to strengthen my game programming skills, focusing on core gameplay mechanics, level design, collision detection, and player controls
- MoodTunes (Android, Python) – A mood-based music recommendation app developed to explore Android development using Python and Buildozer.
- Full clean driving license Category B
